

## Have you or a loved one noticed changes in your memory and thinking?

**Diverse VCID** is a research study using advanced brain imaging and blood-based techniques to better understand how vascular changes cause brain injury and cognitive decline, especially in racially diverse communities.

### You may be able to join if:

- You or a loved one has noticed changes in your memory and thinking
- Your doctor has said there are abnormal white matter changes on your brain MRI
- Taking part in Diverse VCID is up to you. If you join, you can leave the study at any time.

### Potential benefits:

- The study will be free to you and you will be reimbursed for participating.
- Your doctor can use the results from your MRI scan and bloodwork to help diagnose and treat your medical conditions.
- Your participation could lead to better care for you. It could also help your family and those in your community with memory loss in the future.

**Join us on our journey to improve medical care for people with memory loss.**
